TWO PRODUCTS. DISTINCT ROLES. ONE INTELLIGENCE-LED APPROACH.

# Company intelligence meets third-party risk management.

SIGNAL identifies and interprets developments across the companies that matter. NEXUS applies that intelligence to your organization's third-party relationships, obligations and decisions.

| DIMENSION | SIGNAL \| INTELLIGENCE | NEXUS \| MANAGEMENT |
|---|---|---|
| **Primary purpose** | Continuous company intelligence, surveillance and risk monitoring | End-to-end third-party risk and lifecycle management |
| **Fundamental question** | What changed, why does it matter, and what warrants attention? | How does this affect our third-party relationships, controls and obligations? |
| **Information model** | Monitored companies, events, financial indicators, exposures and trends | Third-party relationships, services, contracts, assessments, dependencies and obligations |
| **Core capabilities** | Surveillance, analysis, correlation, sanctions screening, financial intelligence and executive reporting | Onboarding, due diligence, risk assessments, contracting, operational resilience, remediation and governance |
| **Target audience** | Risk and compliance, financial analysts, investment and research teams, procurement and supply chain | TPRM, procurement, compliance, information security, resilience, legal and internal audit |
| **Company coverage** | Companies selected for monitoring, whether or not a contractual relationship exists | Actual or prospective third parties and their specific engagements |
| **Regulatory intelligence** | Surfaces enforcement actions, sanctions and compliance developments | Assesses relationship-specific implications and manages associated reviews and remediation |
| **Financial intelligence** | Financial-health indicators, market developments and credit-related signals | Applies financial intelligence to due diligence and ongoing third-party oversight |
| **Cybersecurity** | Monitors reported cyber incidents, vulnerabilities and emerging threats | Manages security assessments, evidence, controls and remediation |

THE DISTINCTION

# Different missions. Complementary capabilities.

SIGNAL stands on its own for risk, finance, procurement, supply chain and research professionals. NEXUS connects intelligence with third-party governance and execution.

| DIMENSION | SIGNAL \| INTELLIGENCE | NEXUS \| MANAGEMENT |
|---|---|---|
| **Sanctions screening** | Screens monitored companies and surfaces potential matches for human review | Embeds screening in onboarding and ongoing oversight with decisions and audit records |
| **Operational resilience** | Tracks external events, geographic risks and reported dependencies | Maintains service criticality, RTO/RPO, delivery locations and continuity assessments |
| **Fourth-party intelligence** | Identifies reported company relationships and dependencies | Maps disclosed subcontractors to services and operational dependencies |
| **Contracts & obligations** | Provides external intelligence relevant to commercial decisions | Manages contracts, obligations, renewals and lifecycle workflows |
| **AI capabilities** | AI-assisted event interpretation, correlation and intelligence summaries | AI-assisted assessments, evidence analysis, contract review and workflow support |
| **Workflow management** | Company monitoring, alerts and intelligence delivery—not client-specific TPRM workflows | Assignments, approvals, issue remediation, escalation and audit trails |
| **Executive reporting** | Daily briefings, emerging risks, company and market intelligence | Portfolio exposure, assessments, issues, remediation and governance reporting |
| **Decision support** | Evidence and context to inform professional judgment | Organization-specific relationship and control context to support decisions and actions |
| **Commercial model** | Standalone subscription by number of monitored companies; unlimited users | Enterprise platform subscription; integrated SIGNAL company-level surveillance included |
| **Product relationship** | Operates independently of NEXUS | Uses integrated SIGNAL intelligence within third-party management |

HOW THE PRODUCTS WORK TOGETHER

# Intelligence informs. Relationships give it context.

The same external event can mean different things to different organizations. SIGNAL explains the development; NEXUS determines how it intersects with a specific third-party relationship.

| SIGNAL | NEXUS |
| --- | --- |
| External company intelligence<br>What happened?<br>Why does it matter?<br>What warrants attention? | Relationship-specific risk management<br>How are we exposed?<br>Which controls and obligations apply?<br>What needs to be done? |

ILLUSTRATIVE EXAMPLE / BANK OF AMERICA REGULATORY ENFORCEMENT

## SIGNAL identifies and interprets

SIGNAL surfaces regulatory actions concerning anti-money-laundering and sanctions compliance, links to source evidence, explains their significance and monitors subsequent developments.

## NEXUS contextualizes and manages

Where a financial institution uses Bank of America as a third-party service provider, NEXUS can connect the development to the relevant services, contractual obligations, assessments and oversight activities—and support review, escalation or remediation.

SIGNAL does not need to know how a customer uses a monitored company to deliver meaningful intelligence. NEXUS supplies the relationship-specific context.

STRATEGIC POSITIONING

SIGNAL: Know what changed. Know what matters. Know where to act.

NEXUS: Turn third-party intelligence into informed risk management and action.

SIGNAL is a standalone intelligence product—not merely a component of NEXUS. NEXUS adds the governance and operating capabilities needed to manage third-party relationships throughout their lifecycle.
