

STOP MANAGING THIRD-PARTY RISK IN PIECES.

Connected. Not stitched.

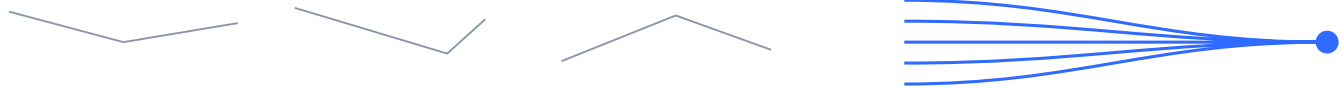

NEXUS connects intake, identity, assessment, contracting, obligations, resilience, surveillance and evidence around one authoritative third-party record. One relationship. One lifecycle. One defensible record.

ONE
authoritative
identity

SIGNAL
built in

AI
automates.
You decide.

EVERY
decision on the
record

THE PROBLEM

You don't have a third-party problem.
You have a fragmentation problem.

The relationship is scattered across procurement, contracts, TPRM, cyber, sanctions, financial data, resilience and business ownership. The handoffs between them are where context disappears, duplicate work begins and defensibility breaks.

HOW IT WORKS

Onboard once.

Describe the purchase in plain English. Every third party resolves to one legal entity, with sanctions and financial viability checked on the spot.

Assess once.

Questionnaires, SOC reports and evidence are gathered through the portal and read by AI. Valid prior assessments and evidence are reused — not repeated.

Contract right.

The right NDA, MSA, SOW or PO from smart templates — reviewed by two AI models and mapped to the regulators that actually govern you.

Watch always.

SIGNAL built in: cyber, sanctions, litigation, adverse media and financial health — one register entry per issue, not hundreds of alerts.

BUILT TO REPLACE, NOT TO ADD

One platform. No suite to buy.
No per-vendor data fees.

NEXUS replaces the patchwork of procurement, vendor-master, CLM, TPRM, sanctions and financial-data tools.

BUILT BY A PRACTITIONER

AI to automate. A human to decide.

Thirty years inside Morgan Stanley, J.P. Morgan, Merrill Lynch, Barclays, SMBC and Bloomberg. AI proposes, logic verifies, your people decide — and every decision is logged for the examiner.

See NEXUS as one connected system.

BOOK A BRIEFING

ONE PLATFORM. THE ENTIRE THIRD-PARTY LIFECYCLE.

One relationship. One lifecycle. One defensible record.

TPRM, contracting, assessment, surveillance and examiner reporting — connected around one authoritative third-party record.

Every user you need. **One subscription.**

ANNUAL PLATFORM PRICING

Tier	Institution	Annual	CLMS
Tier 1 Large	≥\$1T assets / ≥\$10B GWP / ≥\$1B fintech revenue	\$165,000	\$45,000
Tier 2 Mid-sized	Super-regional / regional / scaling fintech	\$110,000	\$35,000
Tier 3 Small	Community banks, credit unions, early-stage	\$55,000	\$25,000

INCLUDED WITH NEXUS

AI & automation

- Assessment intelligence — valid prior assessments and evidence automatically reused
- Legal-entity intelligence — normalization and corporate lineage using SEC and global LEI data
- Intelligent intake — taxonomy-driven classification and guided goods/services selection
- Integrated OFAC screening — sanctions checks that block at the gate
- Real-time financial viability assessment
- Dual-AI contract risk review — two models, one arbiter
- Semantic comparison — contracts, questionnaires and regulations compared by meaning
- Digital Service Agent — text and voice
- Conversational guided intake
- Configurable approval workflows

Risk assessment & governance

- Configurable IRQs — no-code category and question weighting
- Configurable risk appetite and tolerance
- Third-party and engagement-level risk registers
- Inherent and residual risk by domain
- Integrated issues and remediation
- Risk lifecycle — watchlists and work queues
- Third-party self-service portal
- Fourth-party mapping — disclosed by the third party
- Renewal and change-order triggers
- Operational resilience — RTO, RPO and criticality
- Due-diligence and EDD tiering

Contracting & regulatory

- Prebuilt taxonomies, IRQs, questionnaires and contract templates
- Intelligent contract selection — NDA, MSA, SOW and PO
- Automated contract generation
- Native CLMS with e-signature
- Central document and evidence repository
- AI evidence review — SOC reports, policies and supporting documents
- Regulatory mapping library
- Regulation-to-clause generation — only where applicable
- Eight examiner-ready reports, including the DORA register

Surveillance, reporting & platform

- SIGNAL built in — cyber, sanctions, litigation, news, corporate actions and financial health
- Role- and business-unit-based alerts
- Third- and fourth-party concentration analytics
- Operational metrics with SLA monitoring
- Executive, third-party and engagement dashboards
- SLA management
- Standalone deployment — no mandatory suite
- MFA, role-based access and full audit trail

Implementation is 20% of the base subscription, one time. CLMS is an add-on to each tier. No mandatory suite and no per-vendor data fees. Thresholds, weights, service levels and criticality bands are configured by your administrators without code. AI proposes, logic verifies, your people decide, and every decision is logged.

Stop managing third-party risk in pieces.

BOOK A BRIEFING

FROM THE FIRST REQUEST TO THE LAST RENEWAL

The relationship changes. NEXUS keeps the thread.

Most platforms manage workflow. NEXUS runs the relationship.

“I need a third party for this.”

A requester talks or types to the Digital Service Agent. It reads the statement of work, classifies the purchase and guides intake.

“Where is my request?”

The same agent answers in plain English, by text or voice, within each user’s role and business unit.

The third party has to respond.

A secure portal for questionnaires, evidence and subcontractor disclosure, with reminders and escalation that run themselves.

The evidence arrives.

AI reads the evidence, extracts the controls and compares them with the third party’s responses.

Legal asks what changed.

Contracts compared by meaning, not wording, and checked against the regulations that govern you.

Continuity asks how fast.

Recovery time and recovery point per engagement, criticality tiers, delivery locations and critical fourth parties.

The contract comes up for renewal.

NEXUS reassesses only when the change is material.

A risk issue emerges.

It reaches the right specialist, becomes a tracked issue with an owner, and moves the risk rating when it closes.

Risk asks where we are exposed.

See concentration across third and fourth parties by spend, count and criticality.

The business needs its own approvals.

Rules written in plain English, trialled on past engagements, approved by email with the evidence attached.

Leadership asks how risk is running.

Operational metrics against your service levels by domain and team, and an executive dashboard.

The examiner arrives.

Eight regulatory reports on demand, with every decision and override on the record.

YOUR RISK APPETITE, NOT OURS

Tolerance windows, risk weights, service levels and criticality bands are settings your administrators change on screen. No code.

BUILT FOR A REGULATED INSTITUTION

Role-based access down to the document, multi-factor authentication, a full audit log and a separate database for every client.

One third party. One lifecycle. One defensible record.
